

Environmental responsibility of INFORMATION CENTER of the town Liptovský Mikuláš (ICM)

The staff of the INFORMATION CENTER are aware of their responsibility for the protection of life environment. The ICM policy and procedures for environmental sustainability are a significant part of all work activities. The workers are guided in their work and private life according to the greens principles, because it makes economic and ecological sense for the whole society.

Recommendations for selected environmental areas:

A. Minimization of waste generation

- Minimizing document printing.
- Minimization of waste production.
- Minimizing the printing of print materials. Instead, to a greater extent use of media space on the website, social networks and collaborative mobile applications in the field of CR.
- Creating agreements with suppliers of goods for sale (souvenirs should not be packed in others plastic packaging).
- Minimization of packaging (when selling to customers, ICM does not pack goods in plastic packaging and offers an alternative in the form of paper or fabric packaging, which allow multiple use).

B. Ensuring the sorting and recovery of waste

- Thorough separation of waste in common areas of ICM.
- Preference for paper and biodegradable food for fast food disposable dishes and the use of permanent dishes.
- Minimization of plastic waste (bottled water – Limo bar)

C. Transport optimization

- Support for bicycle transport of workers with the use of safe bicycle racks at center.
- Using collective transport instead of individual and walking not only to work, but also in private life.

D. Green procurement of products and services

- Using printing on FSC-certified papers that do not reduce quality environment.
- Cleaning and disinfection in the premises of the center should only be carried out by ecological cleaners means, use recyclable paper and towels in the toilets.

- Buying large-volume cleaning products and thereby minimizing waste from packaging.kupovanie veľkoobjemových čistiacich prostriedkov a tým minimalizácia odpadu z obalov.

E. Use of resources

- Saving water and electricity

F. Green infrastructure

- Live plants in the interior and exterior

G. Environmental awareness

- Realization of regular community projects for workers: e.g. cleaning surroundings of the center, river, park, participation in cycle rides, etc.
- Implementation of information campaigns on a positive attitude towards the environment.
